

MOUNTAIN

This is a backcountry workhorse: the most responsive and hot-blooded binding in our stable comes with an aircraft grade aluminum heelcup, strong transmission, and a rock-solid construction. Whether you bolt through the terrain or trot along gently, you can always rely on the MOUNTAIN as your faithful companion. With the MOUNTAIN MULTIENTRY, you can strap on your bindings using FASTEC or classic ratchets.

sLab base • HC PRO highback • mountain ankle strap • alu lever anodized finish • evo buckle • E.V.A. footbed • G-cell impact absorption • wrapped basebuffer • performer toe strap

soft | FLEX | hard

sLAB.ONE

The **SLAB.ONE** is a lean and mean working machine designed for fast laps, big jumps and all-mountain shenanigans. The lightweight aluminium base bears our new aluminum heelcup highback with a straight and direct flex, as well as top-of-the-line technology from top to bottom. True to you in good times and in bad, this binding is the pick of the bunch for the dedicated ripper.

sLab base • HC PRO highback • ultralight 3D ankle strap • alu lever anodized finish • evo buckle • canted footbed with G-cell impact absorption and wrapped basebuffer • performer toe strap

FT360

This year's latest addition to the lineup is our all new FT360 model. Our classic FT270 has evolved, equipped with the all new ultralight 2-zone urethane ankle strap, making it even lighter and more durable than ever before. Flip the strap upside down to switch the upper and lower stiffness levels and optimize it to your personal needs. Combined with our ERGO X Highback there's not much more you will be looking for in that banging price range.

FT4 Base • ergo X highback • Urethane 2Z ankle strap • light toe strap
